(a) Mango, new season: by spectral residual Q
Coverage
Decile of Q/Q̃ (test spectra)
Split CP (random)
Group CP, abs. score
GC-D (proposed)
(b) Most atypical 10 % of test spectra
Mango: new season
Mango: next season
Mango: new instrument
Soil: new region
Soil: KSSL→LUCAS
Coverage in the highest Q decile
(c) New instruments: bias and bias correction
Coverage
GC-D
GC-D-BC, 3 reference fruit
|Mean prediction bias| of the held-out instrument (% DM)
(d) Bias correction with k reference samples
Group-averaged coverage
no correction
centre shifted
shifted + recalibrated (GC-D-BC)
new instrument
new season
new population
Labelled reference units of the new group (k)
